03/17/2022

Visit us at IFAT 2022 and experience our contribution to the protection of our environment.

Lehmann&Voss&Co. will be participating in this year's IFAT from 30 May to 3 June in Munich (*IFAT / Leading Trade Fair for Environmental Technologies*) for the first time, where it will be presenting its Filtration business unit to an international trade public.

This year our special focus will be on our new segment "Membrane Technologies" and the new partnership with ORELIS Environnement in the field of ceramic membranes for high-performance applications in Germany.

Another central theme will be the catalytic destruction of ozone emitted from various off-gas emissions, e.g. disinfection with ozone.

We would like to welcome you to our joint booth with the German Society for Membrane Technology no. 129/228 in hall A3 so that we can introduce you personally to the latest developments in our service spectrum and discuss your requirements individually.

We look forward to your visit.

With best regards from Hamburg,

The LuV IFAT 2022 Team
